Brilliance AI in ON1 Photo RAW - Preset Cheat Sheet

What is Brilliance AI?

Brilliance AI in ON1 Photo RAW simplifies adaptive adjustments by analyzing each image and automatically applying intelligent tone, color, and local enhancements (like sky or water detection).

Setting Up Brilliance AI in Presets

1. Apply Brilliance AI:

   - Open a photo in Develop.

   - Enable Brilliance AI.

   - Brilliance AI auto-detects elements (sky, water, etc.) and sets tone & color.

2. Add Effects (Optional):

   - Add filters like Dynamic Contrast.

   - Brilliance AI works alongside additional style effects.

Creating a Preset with Brilliance AI

1. Go to Settings Save Settings as Preset.

2. Choose or create a Preset Category.

3. In the options panel:

   - Brilliance AI is listed under Develop.

   - No need to manually toggle tone/color settings.

4. Local Adjustments:

   - Enable if using AI masks (sky, water).

   - This preserves region-based adjustments.

Best Practice: Include locals and effects if combining Brilliance AI with other edits.

Applying Your Preset

1. Open a similar photo.

2. Open the Presets panel.

3. Locate and click your saved preset (e.g., "Test Preset").

4. ON1 previews and applies it:

   - Brilliance AI analyzes the new photo.

- Effects, locals, and tone/color adjust accordingly.

Confirming Brilliance AI Adjustments

Compare tone & color values in the Develop panel.

Each image receives unique adjustments based on Brilliance AI.

Slight differences in highlights, whites, etc., are normal and expected.

Tips & Reminders

- No need to toggle Auto Tone/Color manually.

- Use Brilliance AI in Preferences for one-click edits.

- Combine Brilliance AI with filters/styles for custom presets.
