

# LUMATIC LAB – STYLE MATCHER v1.1.2

Quick Start Guide for Novice Photographers

## Overview

This tool lets you copy the colour style from one photo and apply it to another. Load the photo you want to change, load one or more style photos, choose the look you like, adjust the strength, and export the finished image.

## What You Need

- A modern web browser (Chrome, Edge, Firefox)
- A target photo (the image you want to modify)
- One or more style photos (images whose colour look you want to copy)

## Step by Step

1. Load the target photo: Drag your photo into the box labelled 'Image to be modified'.
2. Add style photos: Drag one or more images into 'Style Sources'.
3. Choose a style: Click a style name in the list to apply it.
4. Adjust strength: Use the Style Intensity slider to control how strong the look is.
5. Name the export: Enter a name in the Export Name field.
6. Save the result: Click 'Save Production Assets' to download the edited image.

## Tips for Better Results

- Use style images with a clear colour mood (warm sunset, cool blue tones, etc.).
- Try several style images and compare them.
- For natural results, reduce Style Intensity to around 40–70%.

## Common Issues

Problem	Cause	Fix
No preview appears	Target image not loaded	Load the main image first
Style does not change	No style image selected	Click a style in the list
Nothing downloads	No style selected	Select a style image before export
