Prompt Workspace 2.15

QUICK START GUIDE • LUMATIC STANDARD

Purpose: create, organise, find, reuse and export a structured library of text prompts.

1. Create your library structure

Start with a **Category** for a broad subject area. Add **Groups** inside it, then create individual **Prompts** inside each group.

2. Add a category

Select **New Category**, enter a non-empty name and choose a colour. Category names must be unique without regard to letter case. Preset colours are Mint, Blue, Gold, Rose, Lilac, Coral, Lime and Cyan; a custom colour is also available.

3. Add a group

Select **New Group** or the add-group action on a category. Choose its parent category and enter a name. A category can contain up to **15 groups**.

4. Add a prompt

Choose **Add Prompt** within a group. Enter a title and non-empty prompt body. You can mark it as a Favourite. A group can contain up to **10 prompts**.

5. Find and organise prompts

Search category names, group names, prompt titles and prompt bodies. Search is case-insensitive and all entered terms must match. Narrow results with Category, Group, colour and Favourites filters. Use **Clear Filters** to reset them.

6. Reuse or export one prompt

Select a prompt and choose **Copy Prompt**. If clipboard access is blocked, use the browser Copy command on the selected text. **Export Prompt** downloads a Markdown (.md) file containing title, category, group and prompt body.

7. Back up the whole library

Choose **Save Data File** to export the complete library as JSON. Keep this file outside the browser profile; local storage is not a separate backup.

8. Import a library

Choose **Replace library** to replace the current library after confirmation, or **Append to library** to merge matching category/group names and add imported prompts. JSON imports are limited to 20 MB. Export a backup before importing.

9. Edit, duplicate or delete

A duplicate is a separate prompt with “(copy)” added to its title and Favourite turned off. Moving a prompt changes its destination group. Deleting a group removes all prompts inside it; deleting a category removes all its groups and prompts.

10. Choose a workspace tone

Dark, 50% Grey and White change the reading surface only; they do not change the stored prompt text.

Important — destructive actions
Deleting a category also deletes every group and prompt inside it. Deleting a group also deletes all prompts inside it. The application has no undo/history facility. Export a JSON backup before deleting or restructuring content.

Storage and persistence
The library is stored in this browser profile using localStorage. Clearing browser data, using private browsing or changing profiles can make that local copy unavailable. Keep a separate JSON backup.

Version qualification
The visible application title and interface say 2.15, while the internal APP_VERSION constant and exported JSON appVersion metadata say 2.14 in the supplied HTML.

Scope
Prompt Workspace manages prompt text and its library structure. It does not run prompts, call an AI model, inspect images or generate/edit images.
